Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-9, 11, and 14-19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims are indefinite, due to the recitation in claim 1, which stipulates that “the microsphere created in one step remains separate from any other microsphere created during another step” in conjunction with the recitation in claim 14, dependent from claim 1, which includes configurations wherein the spheres do not remain separate. For the purposes of examination, the limitation of claim 1 will be interpreted as allowing other microspheres which do contact each other, and may bridge the apace between the non-contacting microspheres. Further in claim 19, exactly what is intended to be conveyed by the term “the step of selecting primarily including...” is unclear.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-9, 11, 14, 17, 20, 29-31, 35, and 36 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Bille et al.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are

Art Unit: 3735

such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 15, 16, 32, and 33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bille et al in combination with Perricone. Bille et al teach a method as claimed except for any discussion of the use of antioxidants. Perricone teaches the desirability of providing antioxidants to eye tissue. It would have been obvious to the artisan or ordinary skill to employ antioxidants in the method of Bille et al, since antioxidants help prevent damage to delicate ocular tissues by free radicals, as taught by Perricone, thus producing a method such as claimed.

Claims 18, 19, 21, 22 and 37-39 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bille et al in combination with Schachar. Schachar teaches a method for correcting vision, including heating the lens in the equatorial region. It would have been obvious to the artisan of ordinary skill to place the ablations of Bille et al in the regions suggested by Schachar, since this is the region where the bulk of the lens tissue is, and which heating would shrink the capsule to some degree, and to provide the various refractive corrections via lens rather than corneal ablation, since these are both recognized as candidates for refractive alteration to improve vision, thus producing a method such as claimed.
